PROFESSIONAL SUMMARY

AI Engineer with 3 years of experience in developing multi-agent systems, computer vision, and NLP applications. Passionate about AI research and model development, with expertise in designing and fine-tuning deep learning models, optimizing neural architectures, and exploring cutting-edge AI techniques. Focused on advancing model performance, understanding model behavior, and contributing to innovative research projects in multi-agent systems and language models.

EDUCATION

FPT University

Mar 2024

B.S. Artificial Intelligence

GPA: 3.37/4.0

SKILLS

Programming Languages: Python, C, Java

Frameworks: LangChain/LangGraph, TensorFlow, PyTorch, Keras, Scikit-learn, Matplotlib

Databases: PostgreSQL, MySQL, SQL Server

Vector Stores: Weaviate, Qdrant

Deploy CI/CD: Github action

Other Tools: Git/GitHub, Linux, Latex, Docker

EXPERIENCE

AI Researcher / Engineer | *VMO Group*

Nov 2024 – Now

- Applied research outcomes to build AI features used in internal products.
- Participated in building AI Agent systems from data preparation to API-level deployment.
- Implemented data pipelines and basic system architecture for AI applications.
- Evaluated AI Agent end-to-end & monitoring AI Agent.
- Optimized latency and cost of AI Agent.
- Selected and integrated suitable AI tools and frameworks for project requirements.
- **Tech Stack:** RAG systems, LangChain/LangGraph, FastAPI, Vector Databases, AI Agents, MCP, AWS Bedrock

AI Researcher / Engineer | *Samsung SDS* May 2024 – Oct 2025

- Fine-tuned GOT-OCR 2.0 for Korean document OCR parsing and document generation use cases.
- Applied research outcomes to build AI features used in internal products.
- Participated in building AI Agent systems from data preparation to API-level deployment.
- Implemented data pipelines and basic system architecture for AI applications.
- Conducted technical investigation and small proof-of-concept experiments for new features.
- Selected and integrated suitable AI tools and frameworks for project requirements.
- **Tech Stack:** PyTorch, RAG systems, LangChain/LangGraph, FastAPI, Vector Databases, AI Agents

AI Consultant – Freelancer | *NeoLab*

May 2025 – Aug 2025

- Designed UX/UI flow for multi-AI-agent systems used in TVC, PR, and short film production.

- Built AI agent workflows including data pipelines and system architecture.
- Worked on coordination logic between multiple AI agents for content generation tasks.
- **Tech Domain:** Multi-AI-Agent systems

AI Engineer | *Advance and Nurture Laboratory*

Aug 2022 – Dec 2023

- Used GAN-based models to generate multiple face variations from keypoints and apply them to video frames.
- Applied MediaPipe face landmark detection to extract 468 keypoints for motion regions such as eyes and mouth.
- Implemented image sharpening and blending techniques to reduce blur during face compositing.
- Applied Laplacian-based blur detection to skip low-quality frames during video processing.

PROJECTS

VQA for Medical Data Using a Visio-Linguistic Model

Sep.2023 - Dec.2023

- Achieved comparable results to the LLM model which uses dataset more than 500 times larger on RAD-VQA
- Use EfficientNet to image features extraction and RoBERTa question features extraction
- This is the first model studied using AMM on the Med-VQA problem. AMM and Prototype learning are only used on problems with text data input, so use these techniques with image and text input
- Prototype Learning uses two layers, the Hopfield Layer and the self-attention layer, to learn prototypes to help classify more effectively

Road Damage Detection and Application on mobile

Apr.2022 - Aug.2022

- Objective: To design a simple mobile app for detect damage on roads
- Technical: Use state-of-the-art models then use Tensorflowlite to deploy on mobile
- Achievement: An app can detect real-time, obtained about 0.82 score using APSO as a metric

AI bot telegram

May 2025

- Objective: create character Text-to-Image anime 2D
- Technical: Build FastAPI server, call model API to replicate,deploy product
- Achievement: To package project to customer

ACHIEVEMENT

Excellent Student Award – Spring 2023

Jan. 2023 – Apr. 2023

Excellent Employee Award - SamSungSDS

Apr. 2025

PAPER PUBLIC

VQA for Medical Data Using a Visio-Linguistic Model

[Link](#)

- Medical VQA with 80.93 percent accuracy breakthrough
- The result achieved an accuracy of 80.93 percent on the overall set, higher than models such as: BAN-VQAMix, CMSA-MTPT, MMQ-BAN, FITS, hi-VQA, Q2ATransformer
- Uses 500 times smaller dataset than other LLM models but achieves similar results
